HOME MAMMALS

Mammals

Mammals (/meˈmɛliə/ from Latin *mamma* “breast”) are **vertebrate animals** constituting the **class Mammalia**, and characterized by the presence of **mammary glands** which in **females** produce **milk** for feeding (nursing) their young, a **neocortex** (a region of the brain), **fur or hair**, and three **middle ear bones**. These characteristics distinguish them from **reptiles** and **birds**, from which they **diverged** in the late **Triassic**, 201–227 million years ago. There are around 5,450 **species** of mammals. The largest **orders** are the **rodents**, **bats** and **Soricomorpha** (**shrews** and others). The next three are the **Primates** (**humans**, **apes**, **monkeys**, and others), the **Cetartiodactyla** (**whales** and **even-toed ungulates**), and the **Carnivora** (**cats**, **dogs**, **seals**, and others).

In **cladistics**, which reflect **evolution**, mammals are classified as **endothermic amniotes**. They are the only living **Synapsida**, which together with the **Sauropsida** (reptiles and birds) form the **Amniota clade**. The early synapsid mammalian ancestors were **sphenacodont pelycosaurs**, a group that produced the non-mammalian **Dimetrodon**. At the end of the **Carboniferous** period around 300

To add a new item:

1. Click on “**Add New Item**”;
2. The new item will appear last in the list;
3. To edit the new item or any other, hover over it and click on “**toothed wheel**”.

The screenshot shows a web browser window with the URL `a3.dev.gentecsys.net/mammal`. The page title is "Mammal - Information". The website header includes a welcome message for the admin, navigation links (EDIT THIS PAGE, PAGES, PATTERNS, MODULES, MEDIA), and the "Atlantis CMS" logo. The main navigation bar has links for HOME, MAMMALS (with a dropdown arrow), and REPTILES. A red arrow points to the REPTILES link, with the text "The new item" written below it. The main content area is titled "Mammals" and contains two paragraphs of text about mammals, with various terms highlighted in red.

Mammals

Mammals (/məˈmæliə/ from Latin *mamma* "breast") are **vertebrate animals** constituting the **class Mammalia**, and characterized by the presence of **mammary glands** which in **females** produce **milk** for feeding (nursing) their young, a **neocortex** (a region of the brain), **fur** or **hair**, and three **middle ear bones**. These characteristics distinguish them from **reptiles** and **birds**, from which they **diverged** in the late **Triassic**, 201–227 million years ago. There are around 5,450 **species** of mammals. The largest **orders** are the **rodents**, **bats** and **Soricomorpha** (**shrews** and others). The next three are the **Primates** (**humans**, **apes**, **monkeys**, and others), the **Cetartiodactyla** (**whales** and **even-toed ungulates**), and the **Carnivora** (**cats**, **dogs**, **seals**, and others).

In **cladistics**, which reflect **evolution**, mammals are classified as **endothermic amniotes**. They are the only living **Synapsida**, which together with the **Sauropsida** (reptiles and birds) form the **Amniota clade**. The early synapsid mammalian ancestors were **sphenacodont pelycosaurs**, a group that produced the non-mammalian **Dimetrodon**. At the end of the **Carboniferous** period around 300 million years ago, this group diverged from the sauropsid line that led to today's reptiles and birds. The line following the stem group Sphenacodontia split-off several diverse groups of non-mammalian synapsids—sometimes referred to as mammal-like reptiles—before giving rise to the **proto-mammals** (**Therapsida**) in the early **Mesozoic** era. The modern mammalian orders arose in the **Paleogene** and **Neogene** periods of the **Cenozoic** era, after the **extinction of non-avian dinosaurs**, and have been among the dominant terrestrial animal groups from 66 million years ago to the present.

To change the position/order:

1. Hover over this area, click the left button of the mouse and hold it;

Check the result. You can see that the new item is now on second position.

The image displays two browser windows from the Atlantis CMS. The top window is the 'Edit Menu' interface for 'MAIN NAV'. It contains input fields for 'MENU NAME' (Main Nav), 'MENU CSS CLASS' (main_nav), and 'MENU ATTRIBUTES'. Below these is a 'MENU ELEMENT ID' field. The 'MENU ITEMS' section lists three items: '1. Home', '2. Reptiles', and '3. Mammals'. A red arrow points from the '2. Reptiles' item in this list to the 'REPTILES' link in the bottom window's navigation bar. The bottom window shows the front-end of the CMS with the 'Atlantis CMS' logo and a navigation bar containing 'HOME', 'REPTILES', and 'MAMMALS'.

Advanced – menu items

1. **“Item Attributes”** - Any valid html attribute (it could be css class, css id, style, data attribute and etc.) which will be appended to the <a> tag;
2. **“Class”** - Here you can set a css class name which will be appended to the tag
3. **“Item onclick”** - Here you can set a JavaScript function which will be executed on click event;
4. **“Child Menu”** - Here you can attach any existing menu (it needs to be created in advance in order to be shown on the drop down list) as a child of the item.

The screenshot shows a web interface for managing menu items. At the top, there's a header 'MENU ITEMS' and a red 'Add New Item' button. Below this, there's a list of menu items. The first two items are '1. Home' and '2. Reptiles'. The third item, '3. Mammals', is expanded to show a form for editing its properties. The form has six fields: 'ITEM LABEL' (containing 'Mammals'), 'ITEM URL' (containing 'mammal'), 'ITEM ATTRIBUTES' (containing 'class="anchor-item"'), 'CLASS' (containing 'menu-parent-item'), 'ITEM ONCLICK' (containing 'someJavaScriptFunction()'), and 'CHILD MENU' (containing 'Sub Nav - Mummals' with a dropdown arrow). A red 'Delete Item' button is at the bottom left of the form. Four red circles with numbers 1 through 4 are placed over the interface: circle 1 points to the 'ITEM ATTRIBUTES' field, circle 2 points to the 'CLASS' field, circle 3 points to the 'ITEM ONCLICK' field, and circle 4 points to the 'CHILD MENU' field.

Here is a screenshot of the attributes

The screenshot displays the Atlantis CMS admin interface. On the left, the 'Edit Menu' form is shown with the following fields:

- MAIN NAV**: A trash icon and a 'Main Nav' label.
- MENU NAME**: 'Main Nav'.
- MENU CSS CLASS**: 'main_nav'.
- MENU ATTRIBUTES**: 'style="font-size:22px;"'.
- MENU ELEMENT ID**: 'my-menu'.
- MENU ITEMS**: A list of items: '1. Home', '2. Reptiles', and '3. Mammals'.
- ITEM LABEL**: 'Mammals'.
- ITEM URL**: 'mammal'.
- ITEM ATTRIBUTES**: 'class="anchor-item"'.
- CLASS**: 'menu-parent-item'.
- ITEM ONCLICK**: 'some.JavaScriptFunction()'.
- CHILD MENU**: 'Sub Nav - Mummals'.

On the right, the 'Mammals' page is shown with the 'Atlantis CMS' logo and a navigation menu. The 'Mammals' dropdown menu is open, showing 'LION' and 'JAGUAR'.

The HTML output is visible in the bottom right, showing the rendered menu structure. Red arrows and numbers 1-4 highlight the mapping between the form fields and the HTML attributes:

- 1: Points to the 'class="anchor-item"' attribute in the HTML output, corresponding to the 'ITEM ATTRIBUTES' field.
- 2: Points to the 'menu-parent-item' class in the HTML output, corresponding to the 'CLASS' field.
- 3: Points to the 'onclick="someJavaScriptFunction()" attribute in the HTML output, corresponding to the 'ITEM ONCLICK' field.
- 4: Points to the 'Sub Nav - Mummals' child menu in the HTML output, corresponding to the 'CHILD MENU' field.

Here is a screenshot of sub-menu
